## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114.

Applicant's submission filed on 03/02/2010 has been entered.

### ***Response to Amendment***

On 03/02/2010, applicant amended claims 11 and 12.

Claims 11-19 are pending. Rejections and objections are withdrawn in view of amendment. Claims 11-19 are allowed.

Applicant's comments are helpful in describing the environment of his claimed invention:

includes a user interface part and a communication management destination registration part, wherein for each registered destination, when a user, through the user interface part, sets reporting timings at which the communication management report is to be transmitted to the registered destination, the communication management destination registration part registers the reporting timings, set by the user through the user interface, for the registered destination, and wherein the communication management report is transmitted to a selected destination at a user-set reporting timing registered for the selected destination (emphasis added)

The closest US patent literature is Adewaga (US 7,230,733). However, prior art neither anticipates nor renders obvious the combination of features, inter alia,

for each registered destination, when a user, through said user interface part, sets reporting timings at which the communication management report is to be transmitted to the registered destination, registers via electronic mail through said

Art Unit: 3625

electronic mail communication part and register the [[set]] reporting timings, set by the user through the user interface, for the registered destination, wherein the communication management report is transmitted to a selected destination at a user-set reporting timing registered for the selected destination.

The closest non-patent literature is previously cited Library Technology ("Choosing a more productive, economical fax machine"), which neither anticipates nor renders obvious the combination of features cited above.

Also of interest is Carr, cited on 12/03/2009, which describes fax server software. However, Carr neither anticipates nor renders obvious the combination of features cited above.
